

## Flowmeters

### Series FLOMAT

## FLOMAT Electromagnetic Insertion Flowmeter

Working pressure manufacturing according to  
PED 97/23/CE (Lloyd's Register Certificate N° 031)

### Introduction

For use in large diameter pipes or open channels as an economical solution for liquid metering.

Flow rate for liquids with electrical conductivity better than 20  $\mu\text{S}/\text{cm}$ , for example.

- Water treatment
- Sewage treatment
- Acid, neutral or alkaline solutions
- Chemical and pharmaceutical products

Suitable for use at low and medium temperatures.

The body is constructed in stainless steel EN 1.4404 (SS 316L), on request available in PVDF wetted parts with electrodes in Hastelloy C, Zirconium, Titanium.

### Benefits

- Readings are independent of density, temperature, viscosity and pressure
- Alternating magnetic field for metering avoids electrolysis
- Absence of obstructing elements gives low pressure loss and will allow the pass of solids
- Can be mounted in any position, provided that the pipe is always full
- Low power consumption
- Good stability with temperature and age
- No moving parts provides zero maintenance
- Can be installed with short straight pipe sections (10DN / 5DN)
- Good chemical resistance of construction materials

### Metering Body Technical Data

- Pressure rating: PN16
- Liquid Temperature range:  
PVDF Head -20°C.....+130°C
- Electrodes:  
Standard Hastelloy C  
Special Order Titanium, Zirconium
- Field coil current: 130 mA 6,25 / 7,5 Hz
- Liquid Conductivity: >20  $\mu\text{S}/\text{cm}$
- Accuracy:  $\pm 3,5\%$

### NOTE:

For temperatures above 70°C it may be necessary to separate the control unit from the metering body, depending on air temperature and ventilation of the control unit.

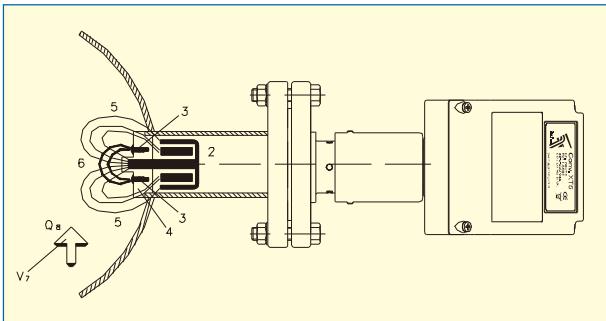

## Measurement Principle

The Flomat electromagnetic insertion flowmeter consists of a sensor which generates a magnetic field in the liquid to be measured. The conductive liquids, as they flow through the magnetic field (5), generate a voltage  $E_6$  (6) between the electrodes (3) which is proportional to the liquid velocity ( $V_7$ ). The generated voltage is processed by the microprocessor electronic circuit to give outputs of mA or Hz proportional to the flow rate  $Q_8$ .

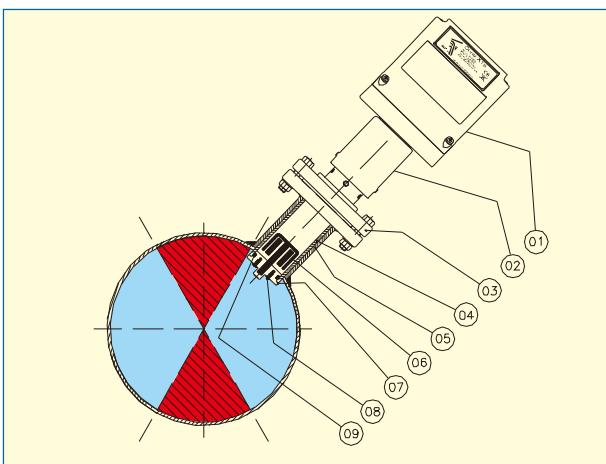

$$Q_8 = K \cdot V_7 \cdot E_6$$

(K=factor of sensor)

## Sensor Construction

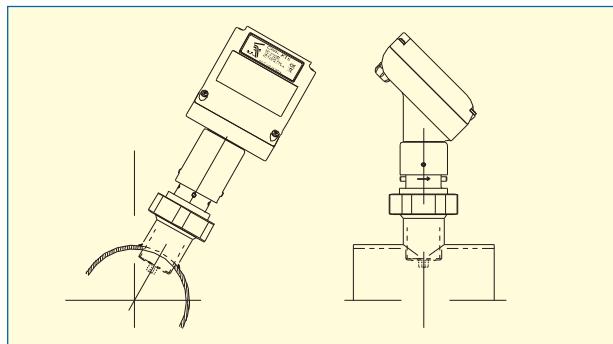

01	Electronics housing	Aluminium/Polycarbonate
02	Union	EN 1.4404 (SS 316L)
03	Flange/BSP nut	EN 1.4404 (SS 316L)
04	Body	EN 1.4404 (SS 316L)
05	Mounting Insert	EN 1.4404 (SS 316L)
06	Field Coil	
07	Head	
08	Electrodes	PVDF
09	Gasket	Hastelloy C
		NBR

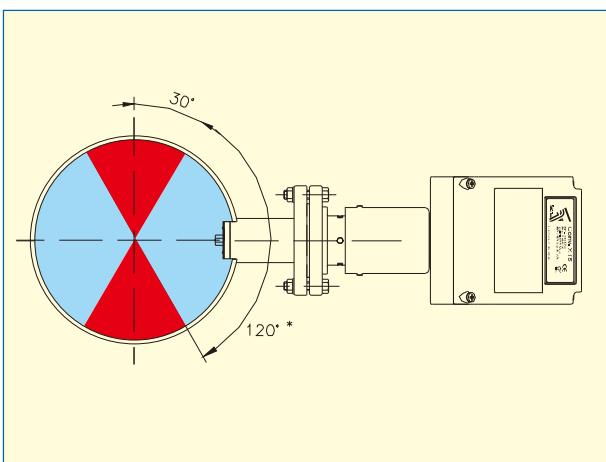

## Installation

- Install with a straight section of minimum 10DN length before and 5DN after
- The pipe should always be full - install in a rising section
- Valves should be mounted after the sensor to maintain a full pipe
- Pumps should be installed before the sensor

## DN40 ... DN65

## DN80 ... DN2000

\* Correct mounting to avoid air pockets and dirt deposits on the electrodes in blue zone.

## Insert (Dimensions in mm) DN40 ... DN2000

### Sensor with Remote Electronic

## Metering body selection

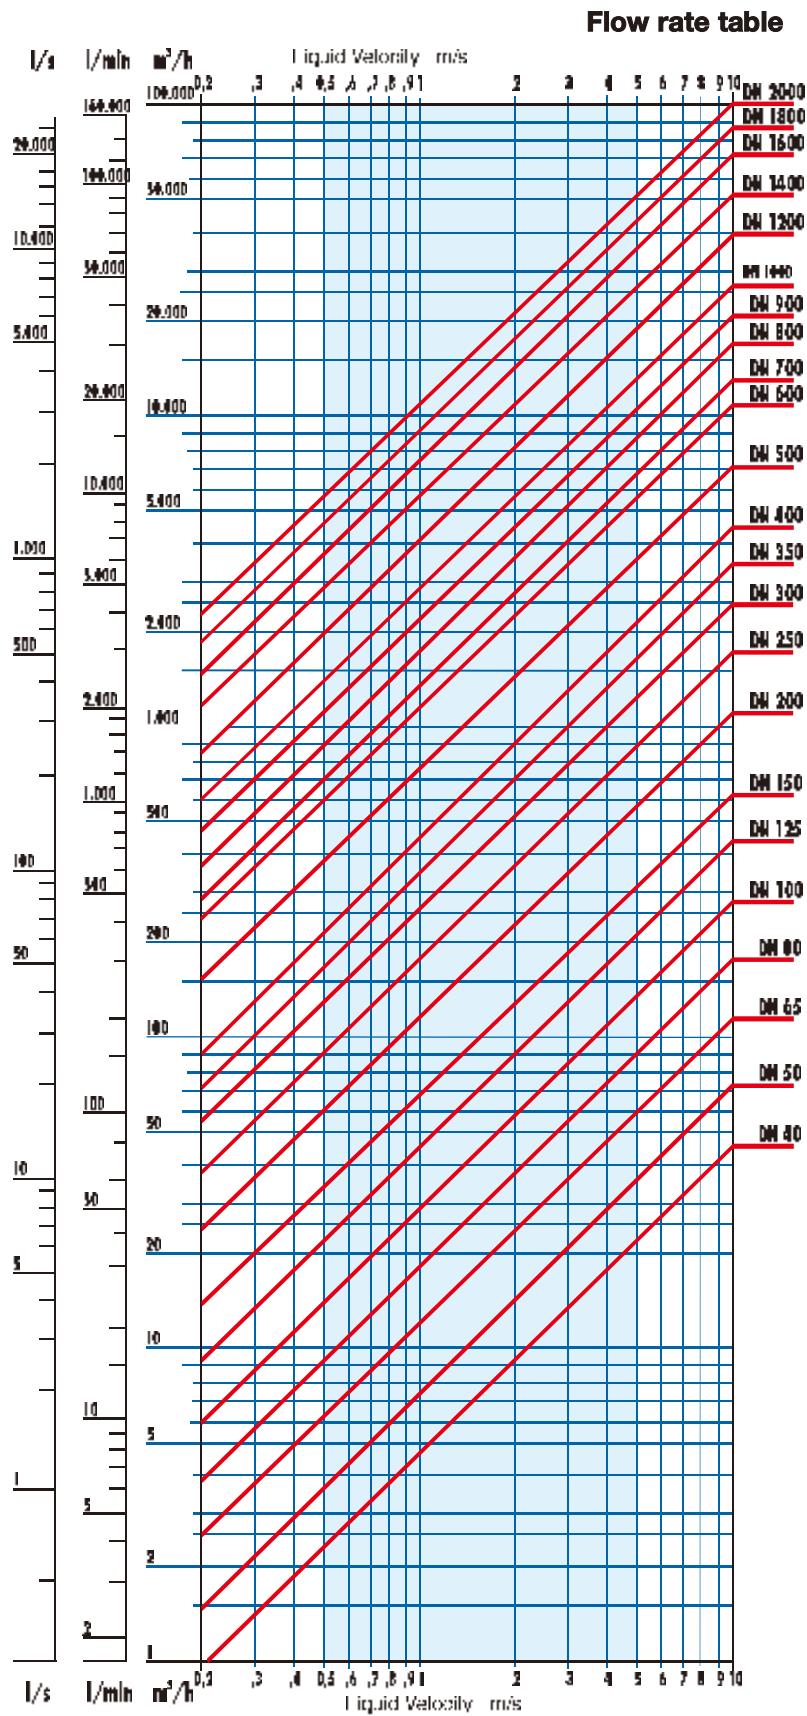

The diagram shows the relation between the liquid speed and the flow rate for different body sizes.

The metering body diameter should be chosen to obtain a maximum normal working liquid velocity of about 3-4 m/s.

The minimum working liquid velocity should not be below 0.5 m/s.

A recommended working liquid velocity is between 1 and 3 m/s.

When the liquid has solids in suspension, it is better to work between 3 and 5 m/s to avoid sedimentation in the pipe and metering body.

## Electronic Control Units

Different models of electronic control units are available to comply with the options of flow indication, maximum/minimum flow rate controls, analog outputs, pulse outputs. All are compatible with the different Flomat sensor models.

### For compact mounting directly on the sensor

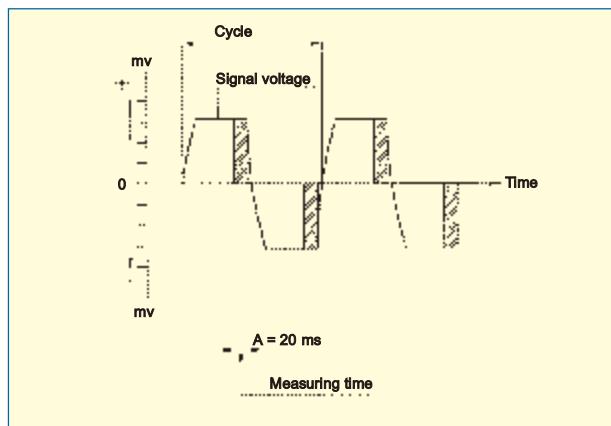

- Series MX, with local indication, signal, mA and pulse outputs

### For wall and pipe bracket mounting

- Series MX (Local Indication) - M\* ... T\*
- Series MX / M\* and MX / T\*

\*M = wall mounting

\*T = pipe mounting

## Electronic Technical Data

### Series MX (Compact) and Series MX-M, MX-T (Separated)

- Painted coated injected aluminium housing.  
IP 67 degree of protection
- Programming via front tactile pushbuttons
- Totalising and partial volume counters
- Programmable batching volume with remote input  
for starting
- Magnetic field: 6.25 Hz square wave for 50 Hz mains  
7.5 Hz square wave for  
60 Hz mains
- Mains supply: 12 V, 24 V, 110 V, 120 V, 220 V,  
240 V ac,  $\pm 10\%$ , 50 or 60 Hz  
24 Vdc  
(others on demand)
- Power consumption: <10 VA
- Min. Flowrate cut off: Programmable
- Measuring range: 0...10 m/s
- Display: 16 character x 2 lines LCD  
6 languages to be selected.  
Program for auto-edition of  
other languages
- Flowrate indication: User programmable measuring units
- Analog output: 4...20 mA programmable
- Programmable pulse output mode:  
Flowrate x Pulses/unit  
volume < 2 pulses/s
- Programmable frequency output mode:  
10..1000 Hz

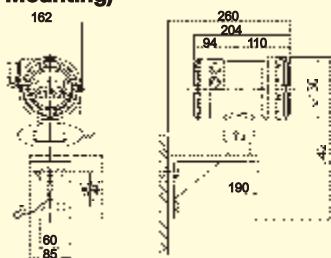

- Logic outputs: Two programmable outputs for  
flowrate alarms, empty pipe  
detection, flow direction or batching
- Adaptive flowrate filter: Integration time programmable  
0.1 ... 25.5 seconds  
Filter reset window programmable
- Linearity: 0.1%
- Zero drift: 0.05%
- Temperature drift: 0.015% / °C
- Working ambient temperature range:  
-10 ...+60°C

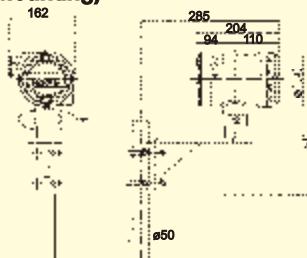

**MX Compact**

## Remote Version Mounting (Electronics)

### MX/M (WALL Mounting)

### MX/M (PIPE Mounting)

## Series XT5, Electronic Control Units

### Technical Features

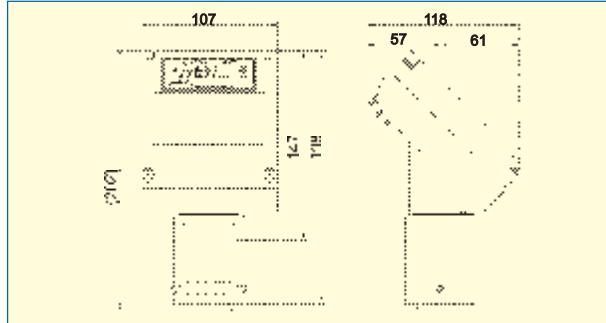

- Power supply: 230, 240, 115, 24 Vac 50/60 Hz  
24 VDC
- Power consumption: ≤ 5 VA
- Analog output: 4-20 mA. Active or passive
- Pulse output:  
**Opto isolated V max.: 30 Vdc. I max: 30 mA**  
Maximum frequency in "P/U" mode: 6,25 Hz  
Maximum frequency in "Hz" mode: 10000 Hz  
Maximum frequency in "Hz" mode: 0,04 Hz  
**Optional. V max: 240 Vac / 350 Vdc. I max: 100 mA**  
Maximum frequency in "P/U" mode: 6,25 Hz  
Maximum frequency in "Hz" mode: 75 Hz
- Totaliser: Nº of digits: 7 (2 decimal points)\*\*  
Digit size: 8 mm  
Button reset
- Flow indicator: Nº of digits 4 (up to 2 decimal point Configuration)\*\*  
Digit size 5 mm

\*\*When 4 digit counter reaches 10000, 1 decimal point is automatically eliminated.

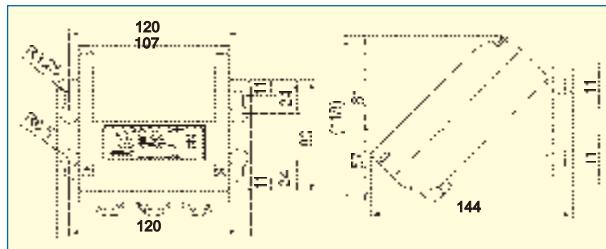

When 5 digit counter reaches 10000, the other decimal point is eliminated.

In accordance with Directive 73/23/CEE Low voltage  
In accordance with Directive 89/336/CEE electromagnetic compatibility

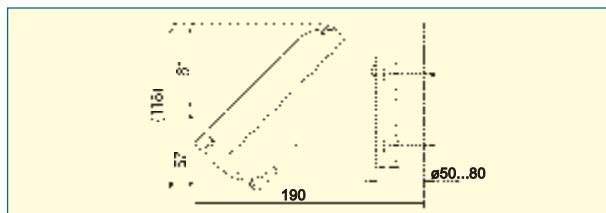

### XT5 (Compact model)

### XT5/M (Wall Mounting)

### XT5/M (Pipe Mounting)

### General Features

- Protection level: IP67
- Ambient temperature range: 0 ... +60°C

### Electrical Features referring to analog loop and Communications

- Reception Impedance: Rx>8,5 M Ω Cx<200pF
- Models: XT5 compact model
- XT5/M...T Wall or Pipe mounted
- XT5H compact model with HART communication
- XT5HM Wall or Pipe mounted with HART communication

### HART Communication

The XT5H converter has a MODEM for HART communication. You will find all the features regarding HART communication in the corresponding document "Field Device Specification"

### Summary of main communication features

• Manufacturer, Model and revision Tecfluid S.A., XT5 converter, Rev.0	Transmitter
• Type of apparatus	6.0
• HART protocol revision	No
• Device description available	1, exterior
• Number and type of sensors	0
• Number and type of actuators	1
• Number and type of auxiliary host signals 1, 4 - 20 mA	2
• Number of Device variables	1
• Number of Dynamic variables	No
• Dynamic Mappables variables	13
• Number of Common practice commands	8
• Number of Device specifics commands	17
• Additional Device Status Bits	No
• Alternative function Modes?	No
• Burts Mode?	No
• Write Protection?	Yes

XT5 Compact

XT5 Wall & Pipe

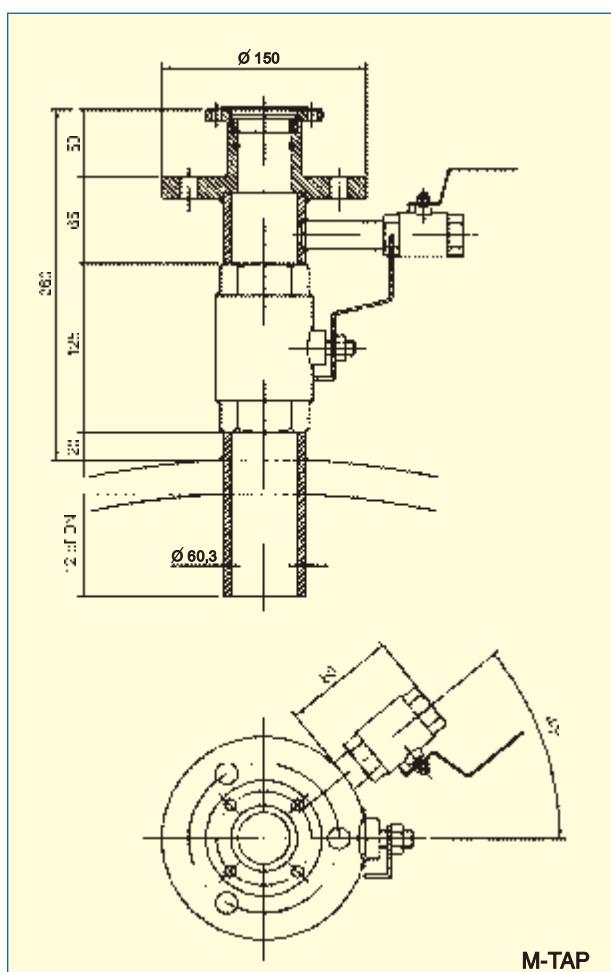

## FLOMAT-TAP

The FLOMAT-TAP Series is an useful complement for the Flomat sensors in some type of installations.

The key features of the product are:

- Flomat sensors can be inserted or removed under pressure (pipe full of liquid).
- Designed for obtaining flow measurement in different points of a distribution network with one only Flomat sensor.
- Maintenance of Flomat sensors without interruption of the flow.

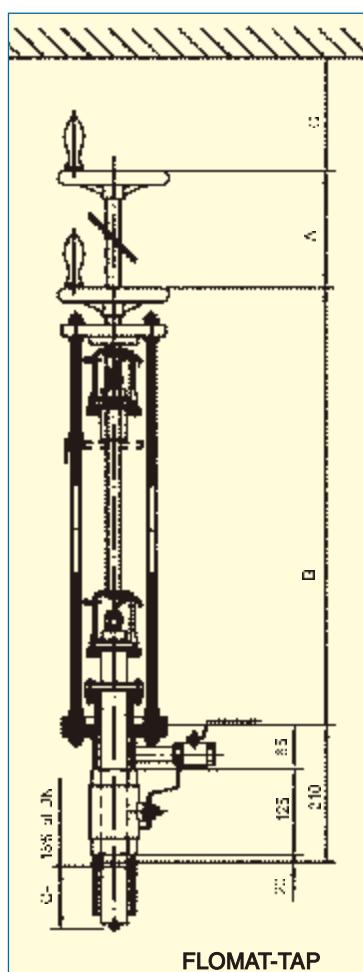

NOTE: the M-TAP accessory must be installed to the main pipe as an pipe as an insert pipe as an adaptor and it is a part of the complete system FLOMAT-TAP.

## Minimum lenght for dismounting

Lenght in mm

DN max.	A	B	C	Total
600	385	720	140	1245
1200	480	830	140	1450
2000	588	960	140	1688
